I am appalled by the attempt of the NAB to limit the ability of satellite radio services to compete in the free market. Their petition (04-160) is a blatant attempt to eliminate their competition using federal regulation. I personally derive great benefit from receiving satellite radio signals and the benefit would be substantially larger if I were able to receive local traffic and weather information. The NAB should not be able to use the power of government to prevent me from receiving radio signals that I have paid for.
